

CASE STUDY: METAL DOORSET INSTALLATIONS

Fire exit

We have installed a number of metal doorsets around the Thames Valley and South of UK, including schools, village halls and business premises.

This metal fire exit doorset was installed by RES and features an internal push bar mechanism compliant to the buildings means of escape.

The original wooden door was damaged and frame was rotten, so was replaced with a weather and damage resistant metal doorset.

Fire exit with vision panel

Metal doorsets come in a variety of designs and specifications and most commonly a custom order. RES Fire have the knowledge and experience to specify and quote the right metal doorset for your application and specific requirements.

This replacement metal fire exit doorset required a vision panel as defined in the customers fire risk assessment as the original was without this feature.

Security door

Our expert team of installers will work professionally and competently on site, ensuring the installation is correctly installed, tested and signed off.

All our engineers are DBS checked, giving you peace of mind for occupants.

RES installed this high security metal door at a warehouse facility.
