

CASE STUDY: Fire safety equipment for manufacturing facility

Customer requirements

Our customer, Stuart Turner, is a world leading manufacturer of high quality pump and water boosting solutions and has a rich heritage in engineering and innovation.

Their prestigious site in Henley on Thames, Oxfordshire comprises a large assembly plant, warehouse, research and training areas as well as a large office space.

RES are required to provide and service all the fire appliances for the site.

The result

RES have provided Stuart Turner with a competitive and compliant fire safety equipment service that meets the specific needs of this prestigious manufacturing facility - helping to ensure the safety of it's workforce.

Maintaining a safe workplace

Ensuring that the appropriate fire safety equipment is installed and maintained in any environment is of paramount importance and with a manufacturing site there is an increased risk of fire from production equipment, storage and processing.

RES provide our customer over seventy fire appliances on site such as CO₂, foam and water extinguishers, as well as fire blankets – each appliance is appropriately located per it's fire usage.

Our BAFE accredited technicians will inspect the appliances on site once a year in accordance with British Standards and Amendments.
