

We've been very busy!

As well as our core inspection, servicing, and maintenance services our engineers have been busy also carrying out the following for new and existing customers.....

Dry riser inspection and annual wet testing

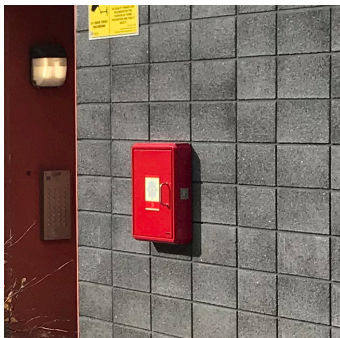

Dry riser remedial works such as replacing glass and fitting compliant signage

Fire hydrant inspection and annual wet testing

Automatic Opening Vent control panel installation for residential areas for blocks of flats in London

Installation of GERDA Premises Information Boxes (PIB's)

Replacing missing or re-installation of correct mandatory fire door signage.

Installation of premium finished signage to customer requirements, not forgetting to install those all-important manual call point covers in some areas to prevent an accidental activation!

Installation of slimline fire document cabinets in the entrance lobbies of residential blocks of flats

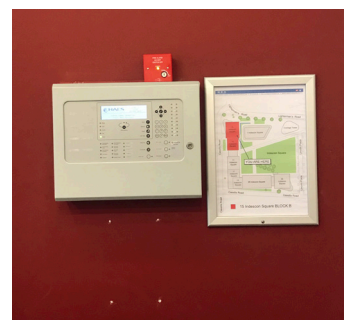

Don't forget to download a free **fire log book** from our web site... [> Download](#)

Installation of photoluminescent level signage in residential blocks of flats.

Not forgetting the dry risers being signed correctly on every floor....

Creation, updating and installation of fire safety system zone and information charts.

Creation, updating and installation of fire evacuation plans.

...continued

Replacing faulty emergency lighting with high quality fittings guaranteed by manufacturers for between 3 and 5 years.

Fire safety audits for customers reoccupying premises following staff having extended periods of time away from their places of work.

With members of staff gradually returning back to the work place we can assist with regular fire safety checks and tests giving you peace of mind.

Sponsorship in our community

RES support a number of clubs in our local area

Alton Football Club
- Under 11 Ninjas

Twyford Comets
- Under 16 Blacks

Website updates

New Sector Pages

We've added new sector pages to engage customers who have specific requirements such as Education, Healthcare, Hotels and Leisure, Residential, Retail and Manufacturing.

New Case Studies

We continue to provide case studies for our installations, maintenance and service work across our various services. These provide a valuable insight into the projects we've undertaken.

Digital transformation

RES are investing in new technology to help improve our services for our customers. These investments are in the software, platforms and hardware available to engineers and office staff. Changes in the way we work and the efficiencies that can be made are at the forefront of our efforts. Below are two examples of this work in progress.

Engineer iPads

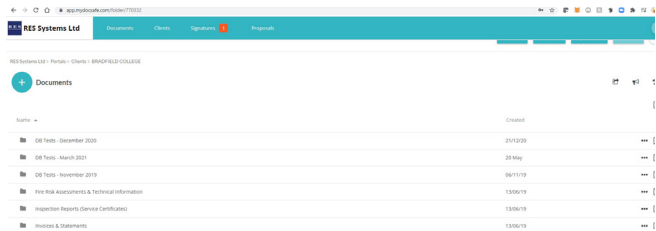

All engineers are being provided with Apple iPads in a phased rollout.

The iPads enable engineers to issue digital certificates, update site and asset information as well as scheduling and email.

Over time, we hope to see a massive reduction in the use of paper throughout the business.

Customer Portals

We've started to provide customers with a portal where we upload digital documents such as DB tests, Certificates, Walk Lists, Fire Risk Assessments and Zone Charts.

Over the next few months we plan to optimise these efforts into a single automated platform for our customers.
