

## CASE STUDY: Fire Door Installation

### Customer requirement

RES were asked by a prominent local solicitors to install a replacement fire rated flat front door at a prestigious apartment complex on behalf of a client. The specification for the door was provided by the managing agents for the premises.

The door needed to be 30 minute fire rated, be glazed and have all the required door furniture installed. Following a detailed quotation with exact dimensions and specification, we were given approval to proceed with the installation.

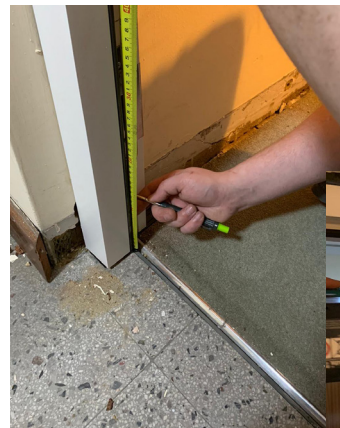

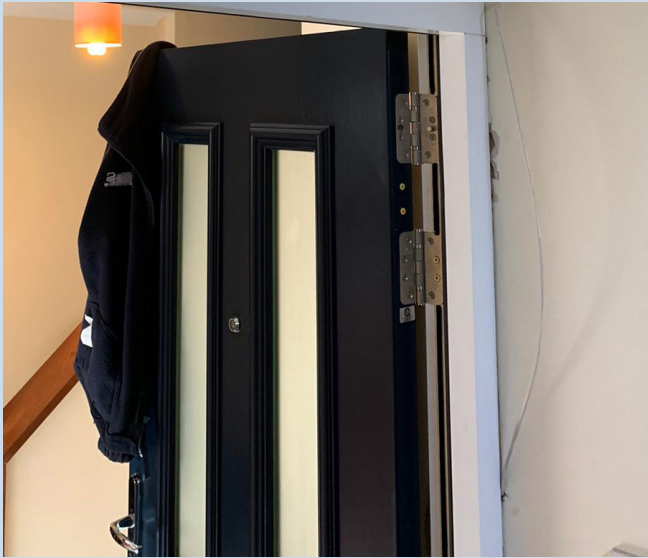

### Our solution

Our BM-Trada trained engineers set about removing the existing door and frame carefully.

The replacement door comes as a complete certified doorset, ready for installation.

Our engineers carefully marked out the fixing positions, ensuring a compliant installation to the manufacturers specification.

All doorset fitting and fixtures were pre installed from the manufacturer – ensuring the integrity of the fire door to it's 30 minute fire rating.

Any minor gaps around frame were expertly filled using a fire rated sealant.

## The result

The flat now has a perfectly fitting, safe and compliant FD30S flat front door, expertly fitted by our technicians

## Client testimonial

*"We were extremely happy with the service provided by RES Fire. James Hill was our point of contact and was friendly, professional and efficient. Our options were explained clearly and we are very pleased with the results for our client. We will continue to use RES in future."*
